UCP Training Environment – Creating a test patient and starting a new care plan

Table of Contents

Introduction

UCP Training Environment is used to train and teach the use of the UCP, using example test patient information. To create a new UCP, you need to import test patient data into the UCP training environment.

Please follow the steps below to do this.

Creating a test patient and starting a new care plan

Step 1: Generate a test NHS number by clicking this link: https://patientsknowbest.github.io/nhsnum/

Select the first option, press 'generate' and copy the test NHS number:

(England/Wales) NHS number, test ranges

| 9994088645 | Generate |

Step 2:

Log into the UCP training environment: https://london-scpa-training.better.care/

You will need to have registered and be given log in credentials by the UCP helpdesk team. If you have not registered you can do this from our Learn page: https://ucp.onelondon.online/training/

Step 3:

To the left of your screen, click the 'H' icon and click **'New Patient'** – note this feature is only available in the Training portal. In the live system you will instead click 'Add New Citizen' which imports patient details direct from the NHS Personal Demographic Service (PDS)

Step 4: Enter the test NHS number you generated in **step 1** and create the additional test patient information:

Step 5: Press submit – you can now start a new test patient care plan for training purposes.

Any issues?

Our helpdesk team are here to support you if you have any questions. You can contact them here: https://ucp.onelondon.online/contact/
